

TopSolid'Wood

Powerful **CAD/CAM** solution for **wood** processing

- Improve sales with superior 3D presentation of your products
- Design quicker with an industry-specific software solution
- Safeguard your know-how in the components and processes libraries
- Reduce lead times with accurate bills of material
- Benefit from an automatic link to your ERP system

The Integrated CAD/CAM Solution

SOFTWARE

TopSolid' Wood

TopSolid'Wood is designed to increase productivity in the wood processing industry

Right throughout the production process all calculation and production documentation is automatically generated. With TopSolid'Wood you not only gain on speed but also on the accuracy of information generated.

TopSolid'Wood improves sales

- Visualization, exploded views, notes and animations in the following formats: JPEG, TIF, AVI, VRML
- Facilitated communication with outsourcers and clients: data exchange via DXF, DWG, IGES, SAT, Parasolid, etc.
- Further processing of drawings by architects or designers

TopSolid'Wood facilitates design

- Industry-specific functions and procedures for interior designers, carpenters and joiners
- Grooves, rebates, ledges, inlays, etc.
- Established assembly procedures: tenons and mortises, miter cuts, counter profiles, dowels, eccentrics, etc.
- Design modification by varying parameters

TopSolid'Wood captures company-specific know-how

- Standard components: screws, metal components, accessories, etc.
- Company-specific components: generation and reutilization of individual know-how
- Automatic generation of bills of material and referencing

TopSolid'Wood reduces production lead-times

- BOMs as required
- Generation of multiple drawings
- Printing of multiple documents
- Automation of the start file
- Variant management

TopSolid'Wood for manufacturing and control

- Complete and coherent digital process chain
- TopSolid'WoodCam for shopfloor CAM
- TopManufacturing as an ERP solution
- Integrated module of Missler's product portfolio

Design, layout and production of kitchens by Euremo in France.

Realistic rendering allows the production of a visual prototype of the highest quality from the design stage.

About Missler Software

Missler Software is the second largest French supplier of CAD, CAM, ERP and PDM solutions. The company's product lines include TopSolid, TopManufacturing and GOelan. Missler Software originated from the merger of Missler Informatique, TopCad, Catalpa and CN Industries. As a result, Missler's product portfolio includes comprehensive modern software solutions for the mechanical engineering industry (general mechanical design, special machinery, tooling, boilerwork, ...) and for sheet metal and wood industries. Companies around the world are using TopSolid solutions - the export share of this product line amounts to more than 60%.
